

### **AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) An electronic patient healthcare system for guiding a patient along a treatment pathway, beginning after a diagnosis of a medical condition requiring a medical event, wherein the treatment pathway is related to the medical event, by educating and preparing the patient for the medical event and post-medical event recovery, comprising:

a healthcare information provider system including a storage device and electronically displayable files containing health information associated with the medical event and retrievably stored on said storage device, the storage device further including a registered patient database for storing information regarding patients being guided by the electronic patient healthcare system and a registered practitioner database for storing information regarding practitioners treating the patients being guided by the electronic patient healthcare system; and

a patient terminal device in electronic communication with said healthcare information provider system and including an input device and a display device adapted to display said electronically displayable files;

said electronically displayable files include at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event, and at least one post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery so as to guide the patient along the treatment pathway, at least one of the pre-medical event and post-medical event sets of files including a task file that instructs the patient to perform a predetermined task, the predetermined task including at least two tasks **selected from the group consisting** of scheduling an appointment with a

medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility, said patient indicating when each of the at least two tasks are completed using the input device of the patient terminal device and said electronically displayable files updating to indicate completion of the tasks, and a calendar file that displays a schedule of the at least two event tasks associated with the treatment pathway and adapted to be modified by the patient using the input device of the patient terminal device; and

both (1) the at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and (2) the at least one post-medical event set of electronically displayable files are predetermined such that the files are stored in the healthcare information provider system in anticipation of the medical event and prior to the medical event, and such that the files are related so as to provide the treatment pathway;

wherein the pre-medical event set of electronically displayable files are to be displayed to the patient before the medical event occurs and wherein the post-medical event set of electronically displayable files are to be displayed to the patient after the medical event occurs.

2. (Previously Presented) The system of claim 1, wherein said electronically displayable files include a single electronically displayable file including a treatment pathway timeline display comprising a plurality of time-sequenced phase images corresponding to time-sequenced phases of health information thereby graphically representing the treatment pathway.

3. (Previously Presented) The system of claim 2, wherein each of said plurality of time-sequenced phase images include at least one electronic link to one of the pre-medical

event set of files and the post-medical event set of files, and the patient can access the health information of a particular time-sequenced phase by interacting with the corresponding time-sequenced phase image.

4. (Previously Presented) The system of claim 1, wherein the task file includes a subfile that allows the patient to enter a new task using the input device of the patient terminal device.

5. (Cancelled)

6. (Previously Presented) The system of claim 1, further including an electronically displayable duplicate account file containing input fields for receiving account information relating to an authorized user to create a duplicate account for permitting the authorized user to access and modify the patient's treatment pathway.

7. (Previously Presented) The system of claim 1, wherein each of a patient's time-sequenced phase images is adapted to be modified by a medical practitioner treating the patient being guided by the electronic patient healthcare system.

8. (Currently Amended) A system for displaying health information capable of guiding a patient along a treatment pathway, beginning after a diagnosis of a medical condition requiring a medical event, wherein the treatment pathway is related to the medical event, by educating and preparing the patient for the medical event and post-medical event recovery, comprising:

a healthcare information provider system including a storage device and electronically displayable files containing health information associated with the medical event and retrievably stored on said storage device; and

a patient terminal device including an input device and a display device adapted to display said electronically displayable files;

wherein said electronically displayable files include a single electronically displayable file including a treatment pathway timeline display comprising a plurality of time-sequenced phase images corresponding to time-sequenced phases of health information, each of said time-sequenced phase images providing access to a pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and a post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery so as to guide the patient along the treatment pathway, the treatment pathway timeline display graphically and contemporaneously displaying, to the patient, at least three phases, and associated tasks for each of such three phases, the at least three phases graphically representing segments of the treatment pathway, and at least one of the pre-medical event and post-medical event set of files includes a task file that instructs the patient to perform ~~one or more predetermined tasks~~ a predetermined task, the predetermined task including at least two tasks selected from the group consisting of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility, said patient indicating when ~~each of the one or more predetermined at least two~~ tasks are completed using the input device of the terminal device and said electronically displayable files updating to indicate completion of the tasks, and a calendar file that displays a schedule of the at least two event tasks associated with the treatment pathway and adapted to be modified by the patient using the input device of the patient terminal device; and

both (1) the at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event

and (2) the at least one post-medical event set of electronically displayable files are predetermined such that the files are stored in the healthcare information provider system in anticipation of the medical event and prior to the medical event, and such that the files are related so as to provide the treatment pathway, the files being electronically associated with each other as being a part of the treatment pathway and linked to the treatment pathway timeline display;

wherein the pre-medical event set of electronically displayable files are to be displayed to the patient before the medical event occurs and wherein the post-medical event set of electronically displayable files are to be displayed to the patient after the medical event occurs.

9. (Previously Presented) The system of claim 8, wherein each of said plurality of time-sequenced phase images include at least one electronic link to one of the pre-medical event set of files and the post-medical event set of files, and the patient can access the health information of a particular time-sequenced phase by interacting with the corresponding time-sequenced phase image, at least one of said at least three phases being associated with a file in the pre-medical event set of electronically displayable files; and at least one of said at least three phases being associated with a file in the post-medical event set of electronically displayable files.

10. (Previously Presented) The system of claim 8, wherein the task file includes a subfile that allows the patient to enter a new task using the input device of the patient terminal device.

11. (Previously Presented) The system of claim 8, wherein the one or more predetermined tasks include at least three of reading a medical information file, taking medication, scheduling an appointment with a medical professional, purchasing a medical

product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility.

12. (Previously Presented) The system of claim 8, wherein the one or more predetermined tasks include at least two of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility.

13. (Currently Amended) A method for guiding a patient along a treatment pathway, beginning after a diagnosis of a medical condition requiring a medical event, wherein the treatment pathway is associated with the medical event by providing health information to educate and prepare the patient for the medical event and post-medical event recovery, comprising:

generating, based on the medical event of the patient, at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event, and at least one post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery;

displaying a single electronically displayable file including a treatment pathway timeline display comprising a plurality of time-sequenced phase images corresponding to time-sequenced phases of health information to illustrate the treatment pathway, each of said time-sequenced phase images providing access to a pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and a post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery so as to guide the patient along the treatment pathway, and at least one of the pre-medical event

and post-medical event set of files includes a task file that instructs the patient to perform ~~one or more predetermined tasks~~ a predetermined task, the predetermined task including at least two tasks selected from the group consisting of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility, said patient indicating when ~~each of the one or more predetermined~~ at least two tasks are completed using an input device of a patient terminal device and said electronically displayable files updating to indicate completion of the tasks, and a calendar file that displays a schedule of the at least two event tasks associated with the treatment pathway and adapted to be modified by the patient using the input device of the patient terminal device; and

permitting the patient to view the treatment pathway timeline display and access the health information of a particular time-sequenced phase by interacting with the corresponding time-sequenced phase image; and

both (1) the at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and (2) the at least one post-medical event set of electronically displayable files are predetermined such that the files are stored in the healthcare information provider system in anticipation of the medical event and prior to the medical event, and such that the files are related so as to provide the treatment pathway;

wherein the pre-medical event set of electronically displayable files are to be displayed to the patient before the medical event occurs and wherein the post-medical event set of electronically displayable files are to be displayed to the patient after the medical event occurs.

14. (Previously Presented) The method of claim 13, further including the steps of providing the patient with a medical practitioner code designating the medical practitioner conducting the medical event and requiring the patient to input the medical practitioner code into an electronically displayable file containing a code input field and transmitting the code to the healthcare information provider system.

15. (Previously Presented) The method of claim 13, wherein the task file includes a task subfile that allows the patient to enter a new task using the input device of the patient terminal device.

16. (Previously Presented) The method of claim 13, wherein the one or more predetermined tasks include at least three of reading a medical information file, taking medication, scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility.

17. (Cancelled)

18. (Previously Presented) The method of claim 13, further including the step of providing an electronically displayable duplicate account file containing input fields for receiving account information relating to an authorized user to create a duplicate account for permitting the authorized user to access and modify the patient's treatment pathway.

19. (Currently Amended) An information storage media, comprising:  
instructions for generating, based on a medical event required by a previously diagnosed medical condition of the patient, at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event, and at least one post-medical event set of electronically displayable files containing health information for preparing and educating the patient for

post-medical event recovery, wherein generation of the instructions begins after the diagnosis of the medical condition requiring the medical event;

instructions for displaying a single electronically displayable file including a treatment pathway timeline display comprising a plurality of time-sequenced phase images corresponding to time-sequenced phases of health information to illustrate the treatment pathway, each of said time-sequenced phase images providing access to a pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and a post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery so as to guide the patient along the treatment pathway, and at least one of the pre-medical event and post-medical event set of files includes a task file that instructs the patient to perform ~~one or more predetermined tasks~~ **a predetermined task, the predetermined task including at least two tasks selected from the group consisting of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility**, said patient indicating when ~~each of the one or more predetermined~~ **at least two** tasks are completed using an input device of a patient terminal device and said electronically displayable files updating to indicate completion of the tasks, and a calendar file that displays a schedule of ~~the at least two event~~ tasks associated with the treatment pathway and adapted to be modified by the patient using the input device of the patient terminal device; and

instructions for generating and displaying an access file for permitting the patient to view the treatment pathway timeline display and access the health information of a particular time-sequenced phase by interacting with the corresponding time-sequenced phase image;

and

both (1) the at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and (2) the at least one post-medical event set of electronically displayable files are predetermined such that the files are stored in the healthcare information provider system in anticipation of the medical event and prior to the medical event, and such that the files are related so as to provide the treatment pathway;

wherein the pre-medical event set of electronically displayable files are to be displayed to the patient before the medical event occurs and wherein the post-medical event set of electronically displayable files are to be displayed to the patient after the medical event occurs.

20. (Previously Presented) The information storage media of claim 19, further including instructions providing an electronically displayable file containing a code input field for receiving a medical practitioner code and transmitting the code to the healthcare information provider system.

21. (Previously Presented) The information storage media of claim 20, wherein the task file includes a subfile that allows the patient to enter a new task using the input device of the patient terminal device.

22. (Previously Presented) The information storage media of claim 21, wherein the one or more predetermined tasks include at least three of reading a medical information file, taking medication, scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility.

23. (Cancelled)

24. (Previously Presented) The information storage media of claim 20, further including instructions for displaying an electronically displayable duplicate account file containing input fields for receiving account information relating to an authorized user to create a duplicate account for permitting the authorized user to access and modify the patient's treatment pathway.

25. (Currently Amended) A electronic patient healthcare system for guiding a patient along a treatment pathway, beginning after a diagnosis of a medical condition requiring a medical event, wherein the treatment pathway is related to the medical event, by educating and preparing the patient for the medical event and post-medical event recovery, comprising:

a healthcare information provider system including a storage device and electronically displayable files containing health information associated with the medical event and retrievably stored on said storage device, the storage device further including a registered patient database for storing information regarding patients being guided by the electronic patient healthcare system and a practitioner database for storing information regarding practitioners treating the patients being guided by the electronic patient healthcare system; and

the healthcare information provider system being interfaceable with a patient device, the patient device providing an input device and a display device for interfacing with the patient, the healthcare information provider system providing electronically displayable files to the patient device;

wherein said electronically displayable files include a pre-medical event set of electronically displayable files and a post-medical event set of electronically displayable files;

the pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event, and

the post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-event recovery so as to guide the patient along the treatment pathway; and

wherein at least one of the pre-medical event and post-medical event sets of files including a task file that instructs the patient to perform a predetermined task relating to the treatment pathway, **the predetermined task including at least two tasks selected from the group consisting of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility,** and said patient indicating when ~~each of the predetermined task is~~ **at least two tasks are** completed using the input device of the patient device and said electronically displayable files updating to indicate completion of the tasks, and a calendar file that displays a schedule of **the at least two event** tasks associated with the treatment pathway and adapted to be modified by the patient using the input device of the patient terminal device; and

both (1) the at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and (2) the at least one post-medical event set of electronically displayable files are predetermined such that the files are stored in the healthcare information provider system in anticipation of the medical event and prior to the medical event, and such that the files are related so as to provide the treatment pathway;

wherein the pre-medical event set of electronically displayable files are to be displayed to the patient before the medical event occurs and wherein the post-medical event

set of electronically displayable files are to be displayed to the patient after the medical event occurs.

26. (Previously Presented) The system of claim 25, wherein the predetermined task includes at least two of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility.

27. (Previously Presented) The system of claim 25, wherein said electronically displayable files include a treatment pathway timeline display comprising a plurality of time-sequenced phase content corresponding to time-sequenced phases of health information thereby illustrating the treatment pathway.

28. (Previously Presented) The system of claim 27, wherein each of a patient's time-sequenced phase content is adapted to be modified by a medical practitioner treating the patient being guided by the electronic patient healthcare system.

29. (Previously Presented) The system of claim 25, wherein the patient device is at least one of personal computer, a portable computer, a dumb terminal, a thin client, a hand-held device, and a wireless phone.

30. (Currently Amended) A system for displaying health information capable of guiding a patient along a treatment pathway, beginning after a diagnosis of a medical condition requiring a medical event, wherein the treatment pathway is related to the medical event, by educating and preparing the patient for the medical event and post-medical event recovery, comprising:

a healthcare information provider system including a storage device and electronically displayable files containing health information associated with the medical event and retrievably stored on said storage device; and

the healthcare information provider system interfaceable with a patient terminal device, the patient terminal device including an input device and a display device adapted to display said electronically displayable files;

wherein said electronically displayable files include a single electronically displayable file including a treatment pathway timeline display comprising a plurality of time-sequenced phase images corresponding to time-sequenced phases of health information, each of said time-sequenced phase images providing access to:

a pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event, and

a post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery,

so as to guide the patient along the treatment pathway, and at least one of the pre-medical event and post-medical event set of files includes a task file that instructs the patient to perform ~~one or more predetermined tasks~~ a predetermined task, the predetermined task including at least two tasks selected from the group consisting of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility, said patient indicating when ~~each of the one or more predetermined at least two~~ tasks are completed using the input device of the patient terminal device and said electronically displayable files updating to indicate completion of the tasks, and a calendar file that displays a schedule of the at least two event tasks associated with the treatment pathway and adapted to be modified by the patient using the input device of the patient terminal device; and

both (1) the at least one pre-medical event set of electronically displayable files

containing health information for preparing and educating the patient for the medical event and (2) the at least one post-medical event set of electronically displayable files are predetermined such that the files are stored in the healthcare information provider system in anticipation of the medical event and prior to the medical event, and such that the files are related so as to provide the treatment pathway;

wherein the pre-medical event set of electronically displayable files are to be displayed to the patient before the medical event occurs and wherein the post-medical event set of electronically displayable files are to be displayed to the patient after the medical event occurs.

31. (Previously Presented) The system of claim 30, wherein each of said plurality of time-sequenced phase images include at least one electronic link to one of the pre-medical event set of files and the post-medical event set of files, and the system provides for the patient accessing the health information of a particular time-sequenced phase by interacting with the corresponding time-sequenced phase image.

32. (Previously Presented) The system of claim 31, wherein the task file includes a subfile that allows the patient to enter a new task using the input device of the patient terminal device.

33. (Previously Presented) The system of claim 30, wherein the healthcare information provider system is interfaceable with a medical practitioner terminal device, the medical practitioner terminal device for interfacing with a medical practitioner; and

the healthcare information provider system inputting inquiries from and outputting patient monitoring information to the medical practitioner terminal device, in response to the inquiries.

34. (Previously Presented) The system of claim 30, wherein the storage device

includes:

a patient database storing data about a patient accessing the healthcare information provider system; and

a registered practitioner database storing data about at least one registered practitioner associated with the patient.

35. (Cancelled)

36. (Previously Presented) The system of claim 30, wherein the healthcare information provider system provides for the patient to access health information associated with a particular time-sequenced phase by interacting with a particular time-sequenced phase image through the patient terminal device.

37. (Previously Presented) The system of claim 36, wherein the healthcare information provider system provides for the time-sequenced phase images, associated with a particular patient, to be modified by a registered practitioner, who is associated with the particular patient.

38. (Previously Presented) The system of claim 36, wherein the healthcare information provider system provides for the time-sequenced phase images, associated with a particular patient, to be modified by a person who is associated with the particular patient.

39. (Currently Amended) A system for guiding a patient along a treatment pathway, beginning after a diagnosis of a medical condition requiring a medical event, wherein the treatment pathway is associated with the medical event by providing health information to educate and prepare the patient for the medical event and post-medical event recovery, the system comprising:

means for generating, based on the medical event of the patient, at least one pre-medical event set of electronically displayable files containing health information for

preparing and educating the patient for the medical event, and at least one post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery;

means for outputting, to a patient terminal device, a single electronically displayable file including a treatment pathway timeline display comprising a plurality of time-sequenced phase images corresponding to time-sequenced phases of health information to illustrate the treatment pathway, each of said time-sequenced phase images providing access to a pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and a post-medical event set of electronically displayable files containing health information for preparing and educating the patient for post-medical event recovery so as to guide the patient along the treatment pathway, and at least one of the pre-medical event and post-medical event set of files includes a task file that instructs the patient to perform ~~one or more predetermined tasks~~ a predetermined task, the predetermined task including at least two tasks selected from the group consisting of scheduling an appointment with a medical professional, purchasing a medical product, taking a medical quiz, and evaluating at least one of a medical practitioner and a medical service facility, said patient indicating when ~~each of the one or more predetermined~~ at least two tasks are completed using an input device of a patient terminal device and said electronically displayable files updating to indicate completion of the tasks, and a calendar file that displays a schedule of the at least two event tasks associated with the treatment pathway and adapted to be modified by the patient using the input device of the patient terminal device; and

means for providing for the patient to view the treatment pathway timeline display and access the health information of a particular time-sequenced phase by interacting with

the corresponding time-sequenced phase image; and

both (1) the at least one pre-medical event set of electronically displayable files containing health information for preparing and educating the patient for the medical event and (2) the at least one post-medical event set of electronically displayable files are predetermined such that the files are stored in the healthcare information provider system in anticipation of the medical event and prior to the medical event, and such that the files are related so as to provide the treatment pathway;

wherein the pre-medical event set of electronically displayable files are to be displayed to the patient before the medical event occurs and wherein the post-medical event set of electronically displayable files are to be displayed to the patient after the medical event occurs.

40. (Previously Presented) The system of claim 39, further including means for providing the patient with a medical practitioner code designating the medical practitioner conducting the medical event; and

the healthcare information provider system requiring input, from the patient, of the medical practitioner code.

41. (Previously Presented) The system of claim 39, wherein the task file includes a subfile that allows the patient to enter a new task using the input device of the patient terminal device.

42. (Previously Presented) The system of claim 8, wherein the medical event is one of an operation, treatment, testing, pregnancy and birth of a baby.

43. (Previously Presented) The system of claim 1, wherein the medical event is one of an operation, treatment, testing, pregnancy and birth of a baby.

44. (Previously Presented) The system of claim 1, wherein said electronically

displayable files include a treatment pathway timeline display comprising a plurality of time-sequenced phase content, corresponding to time-sequenced phases of health information thereby providing the treatment pathway.

45. (Previously Presented) The system of claim 44, wherein the plurality of time-sequenced phase content includes at least one of text representation and graphical representation.

46. (Previously Presented) The system of claim 2, wherein the time-sequenced phase images include at least one of text representation and graphical representation.

47. (Previously Presented) The method of claim 14, further including providing general content to a further user who does not utilize a code.

48. (Previously Presented) The method of claim 47, wherein the general content includes at least one of a physicians directory, a graphical diagnostic, and product links.
